

# ably

We place nurses at the center, so they can place patients first.

## LYNG systemet

Hvordan virker det?

Du finder filmen på YouTube

YouTube

Men der findes en løsning, der kan gøre hverdagen for plejepersonalet lettere

Men der findes en løsning, der kan gøre hverdagen for plejepersonalet lettere

### No-touch monitoring

High accuracy vitals, movement tracking and fall prevention

### Connectivity hub

Powers connectivity in every environment  
– for your own and Ably devices

### Oversight & Documentation

Patient dashboard & analytics

### Wearables Selection

Customizable assortment of wearables

## No-touch Monitoring

### Reliable patient data collection

in every position ensured through large surface mats.

### Upgrade standard bed to a smart bed

by simple integration of Lyng Mat and Lyng Hub.

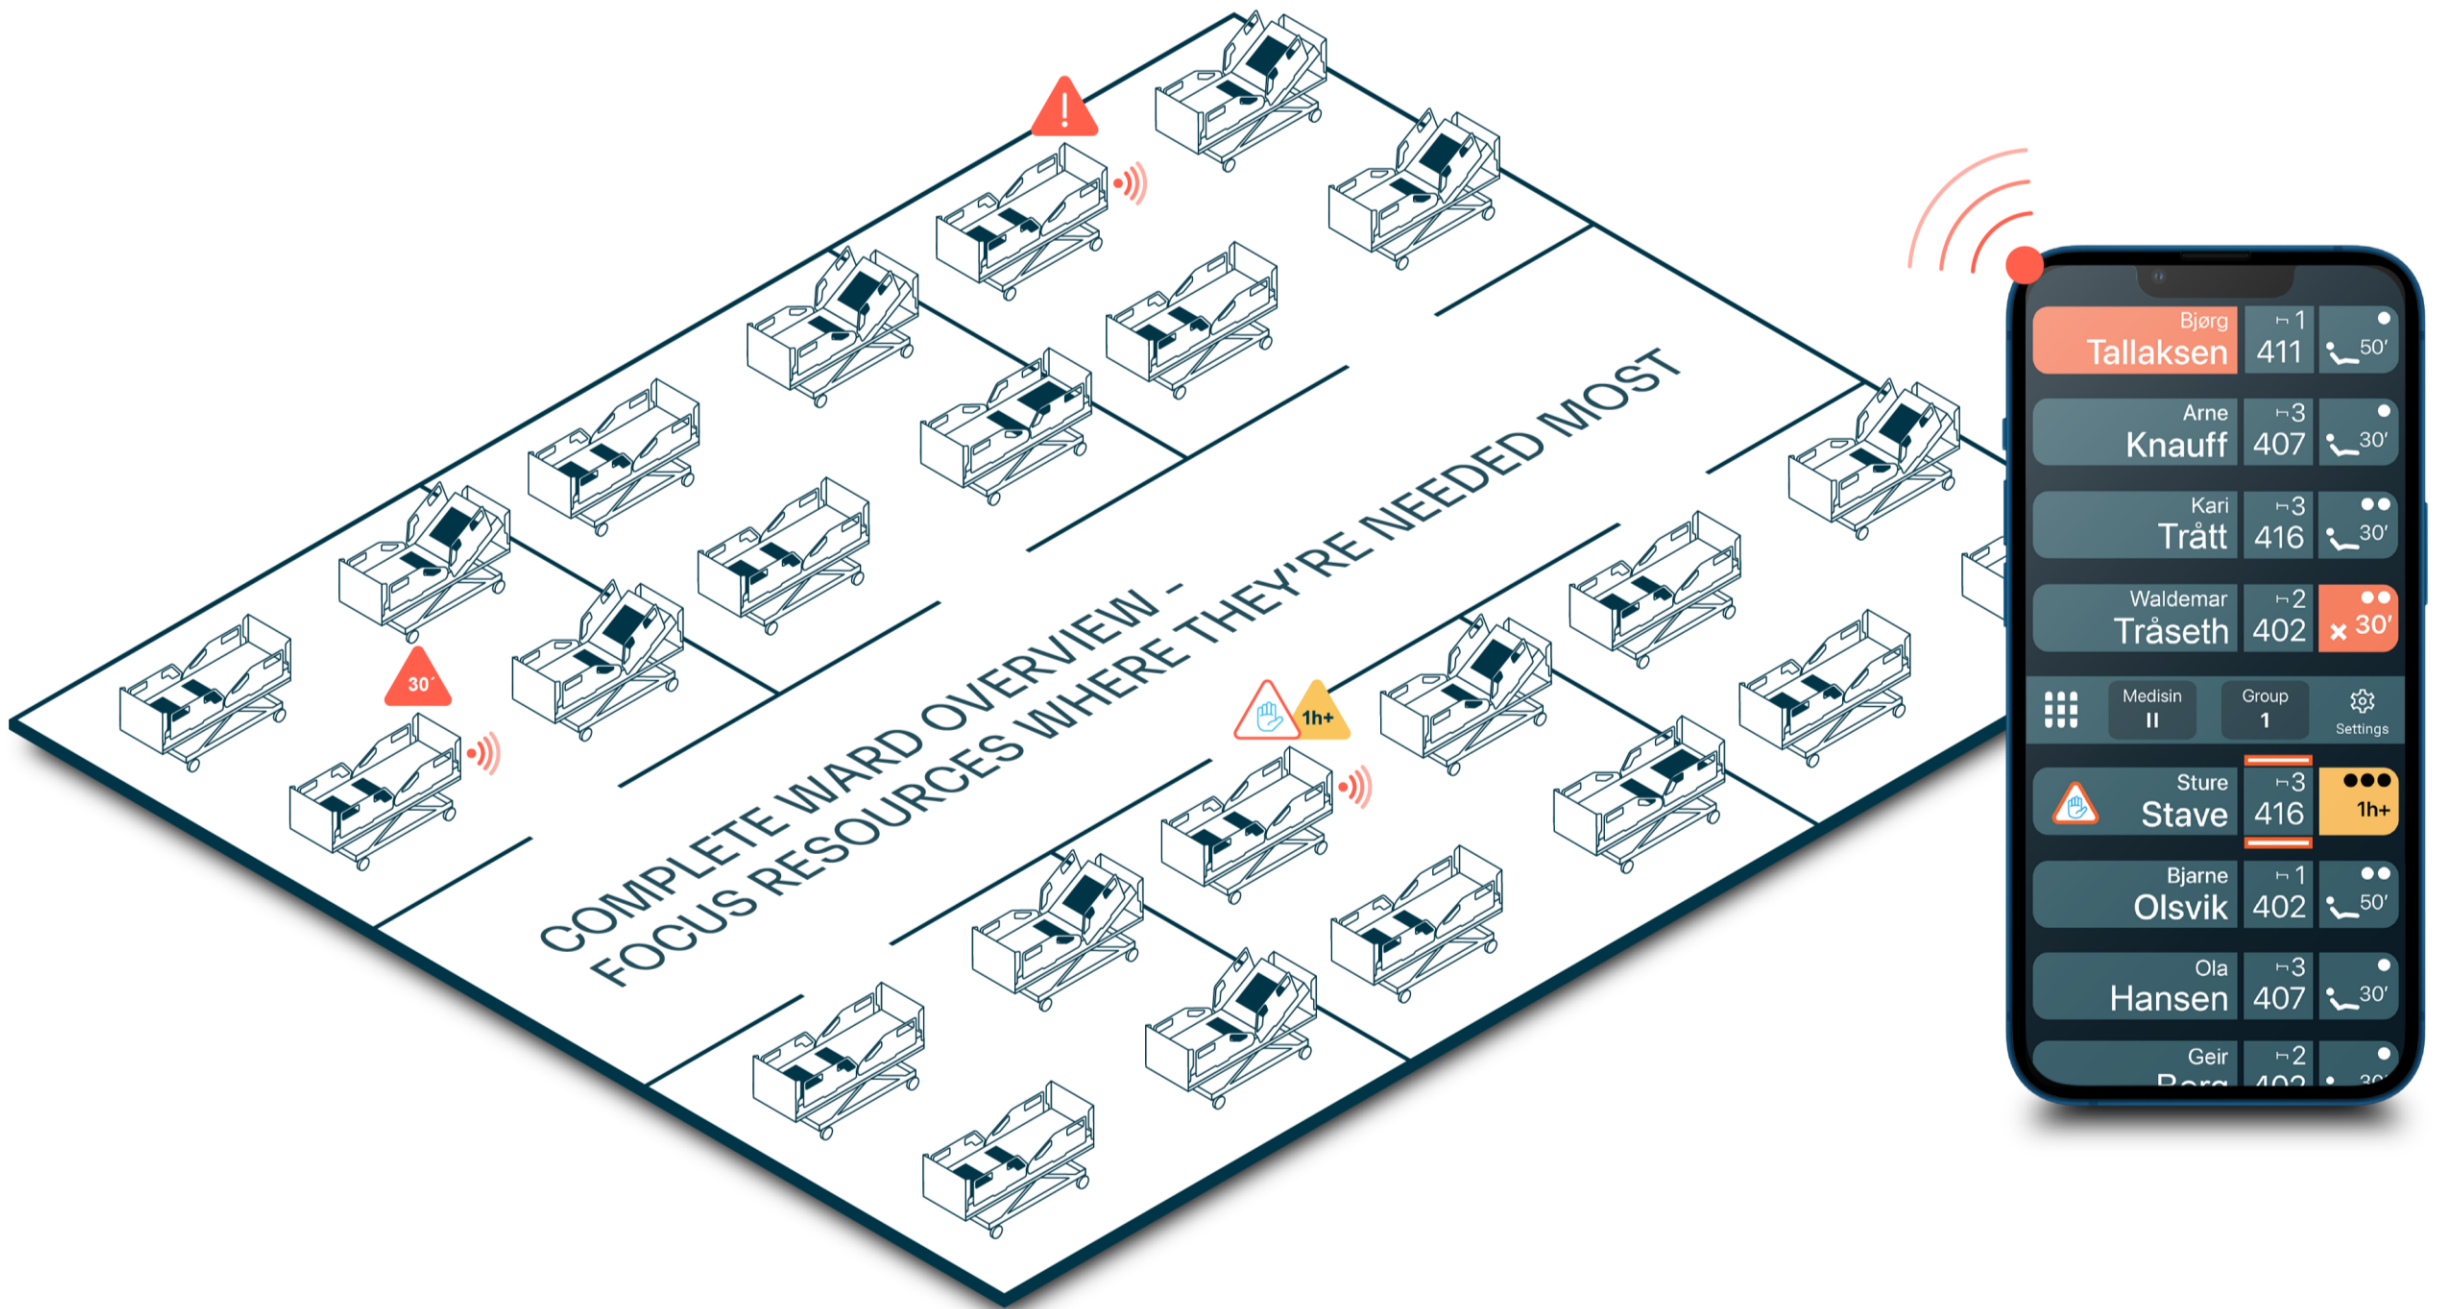

### Continuous measurements

of heart rate, respiration, motion, fall alarm

### Non-contact and non-obtrusive

measurements. Lyng Mats are placed underneath the mattress, in bed shape.

The screenshot shows a digital scale interface with the following elements:

- Top Left:** A red triangle icon with a white exclamation mark, indicating a warning or error.
- Top Center:** The text "007" is displayed in large white digits.
- Top Right:** The text "kg" is displayed in white.
- Bottom Left:** The text "Halvard Lorentzen" is displayed in white.
- Bottom Center:** The text "Allowed" is displayed in white.
- Bottom Right:** A red triangle icon with a white exclamation mark, indicating a warning or error.
- Far Right:** A series of icons and numbers representing different measurement units and values:
  - A small icon of a person sitting, followed by "131 /min" and "91 /min".
  - A small icon of a person sitting, followed by "25 /min" and "21 /min".
  - A small icon of a person sitting, followed by "50 /min" and "11 /min".

# Overview

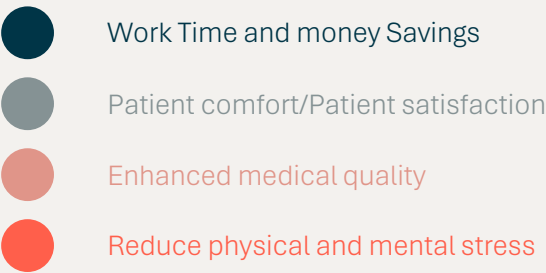

- + Entire ward at one glance
- + Possible to highlight and show details for each patient
- + Incoming and dismissed patients are shown
- + Use of dynamic effects to highlight important events

# Gevinster

# Hvilken værdi bringer vi

## Dashboard Functions (real-time monitoring - alert, documentation & analytics)

### Data Collection:

Vital signs (Heart rate, Respiration rate, Blood pressure, Temperature, SPO2)  
Weight  
Bed Exits

### Analytics:

Early Warning Score (NEWS)  
Fall Prevention  
Mobility (relevant at Geriatry only)  
Agitation

Automated documentation

## Effects

Early detection of adverse events & acute cardiovascular complications  
Early detection patient condition  
Reduction patient falls  
Reduction ICU transfers  
Improvement of accurate medical decision making  
Precise medication  
Increase of legal protection  
Optimized process redesign  
Reduction length of stay

# Betydelige tidsbesparelser

Antal senge på din institution:

20

## Time saved on collecting vitals

Shift ● 2h 40m

Day ● 5h 20m

Week ● 37h 20m

## Time saved on documenting mobility

Shift ● 1h

Day ● 2h

Week ● 14h

Beregningerne er baseret på pilotprojekter fra to tyske sundhedsinstitutioner og følger disse rutiner:

- Vitale parametre registreres én gang pr. vagt (2 vagter pr. dag) – det tager 8 minutter pr. patient.
- Bevægelse dokumenteres én gang pr. vagt – det tager 3 minutter pr. patient.

Tjek dine potentielle tidsbesparelser her:

# MDR classification Roadmap

# IT security & data hosting one-pager (Microsoft Azure, EU-compliant)

We align our practices with internationally recognized standards, including ISO 81001 (Health Software and Health IT Systems Safety) and ISO/IEC 27001 (Information Security, Cybersecurity, and Privacy Protection).

While we are not yet certified under these standards, we actively follow their principles and embed them into our development, operations, and data protection routines.

Achieving formal certification is part of our roadmap, and we are working towards it as we continue to scale.

Our solution also fully complies with the EU's General Data Protection Regulation (GDPR), ensuring that patient data is handled in a lawful, transparent, and secure manner.

The core of our platform is built on Microsoft Azure, a trusted and highly secure cloud infrastructure. Azure provides complete control over data residency—for example, data from German patients is stored and processed exclusively within Germany, with no cross-border transfers unless explicitly authorized and in compliance with applicable laws.

For hospitals with stricter data control policies, we offer the option to deploy all services locally on dedicated servers within the hospital's data center. This setup ensures that sensitive data remains entirely on-site.

We're mindful of the responsibility that comes with handling patient-related data. As we grow, we continually explore ways to strengthen data protection and ensure that sensitive information is handled carefully and in accordance with best practices.

# Integration and Interoperability

Our system offers flexible deployment options tailored to the hospital's existing IT infrastructure:

## Standalone

### Island setup

No dependencies on HIS

Ideal for outdated/closed setups

## Standards-Based Integration

### FHIR-based

Open FHIR API → any modern HIS

Fast & scalable with modern infrastructures

## Custom Integration

### Legacy adaptable

Works with e.g. Dedalus, Nexus

Browser embeds, HTML windows, custom APIs

# Economy, resources, and studies

## **We don't charge for tests, trials, and pilot projects.**

Instead, we view them as a shared investment - an opportunity to build trust, tailor our solution to your organization's real-world needs, and explore future collaboration opportunities.

At the very least, we'd love to have a dedicated project lead from your side - someone we can work closely with throughout the pilot.

## **We never underestimate the importance of**

## **onboarding.**

Our process is thorough, hands-on, and built around listening. We ensure everyone feels included, well-prepared, and confident before going live.

In our experience, a great start is key to long-term success.
